

INVESTOR AWARENESS FOR INDIA

Pause before you trust a financial message.

Pause. Check. Understand.

Bharat Scan Shield helps retail investors inspect suspicious financial content, understand its warning signs, and choose safer next steps.

The problem

Investment pitches arrive through WhatsApp, Telegram, SMS, and social media. Guaranteed returns, urgency, fake authority claims, and payment requests can pressure people to act before they verify.

How it works

01 · Submit

Paste text, speak, or select a screenshot.

02 · Inspect

See matched phrases and weighted warning signals.

03 · Verify

Review practical next steps and check official sources.

Signals it checks

Guaranteed or unusually high returns, urgency, requests for money or sensitive details, investment groups, authority claims, crypto/app pitches, and suspicious links.

Designed for real use

- English and Hindi interface and explanations.
- Text, voice input, and browser-side screenshot OCR.
- Matched phrases make warnings explainable, not just a score.

Trust and transparency

- Scanned text is sent to the analysis service but not stored by the app.
- Screenshot files stay on the user's device; OCR runs in the browser.
- Optional AI sends text to the configured provider; Gemini free-tier content may be used to improve Google's products.
- Recent checks are kept only in the current browser tab.

Technology

FastAPI Python rules HTML/CSS/JS
Tesseract.js Web Speech API
Optional Gemini API

Important limitation

This educational tool is not financial advice or proof of fraud. Rules can miss new scam wording or flag genuine messages. A low score does not mean a message is safe; verify independently.
